

Pig Pen Ciphers - How they work

This is the KEY

A	B	C	J	K	L
D	E	F	M	N	O
G	H	I	P	Q	R

By locating the letters in the key, you can identify the symbols which replace the letter.

To make it harder, the letters can be in different positions to these, so a symbol in one message might represent a different letter in another...without the key it would be very hard to decrypt.
